PROFESSIONAL SUMMARY

Azure Data Engineer with 8.8 years of IT experience, including 5.8 years of hands-on Azure data engineering and 2 years building solutions on Microsoft Fabric, delivering 100+ production data pipelines across Azure and Fabric. Started as a SQL Developer, which built a strong foundation in T-SQL, data modeling and query tuning. Designs and builds end-to-end ETL/ELT pipelines with Azure Data Factory, Azure Databricks, PySpark and Delta Lake, and develop Fabric Lakehouse and Warehouse solutions on OneLake using Fabric Data Factory pipelines and Spark notebooks. Hands-on experience with incremental data loading, Lakehouse (medallion) architecture, REST API integration, CI/CD with Azure DevOps, and pipeline monitoring and performance optimization. Holds the DP-700 Fabric Data Engineer Associate credential.

CORE COMPETENCIES

Azure Data Factory (ADF) | Azure Databricks | Azure Synapse Analytics | Azure Data Lake Storage Gen2 (ADLS Gen2) | Microsoft Fabric | PySpark | Apache Spark | SQL and T-SQL | Python | Delta Lake | ETL/ELT Pipelines | Data Warehousing and Data Modeling | Lakehouse Architecture | Azure SQL Database | Azure DevOps and CI/CD | Data Integration and Transformation | REST API Integration | Pipeline Monitoring and Optimization | Git and Version Control

TECHNICAL SKILLS

- **Microsoft Fabric:** OneLake, Lakehouse, Warehouse, Fabric Data Factory (pipelines, Dataflows Gen2), Spark notebooks, OneLake shortcuts
- **Azure Data Services:** Azure Data Factory (ADF), Azure Databricks, Azure Synapse Analytics, Azure Data Lake Storage Gen2 (ADLS Gen2), Azure SQL Database, Azure Key Vault
- **Big Data & Processing:** Apache Spark, PySpark, Spark SQL, Delta Lake
- **Languages & Querying:** SQL, T-SQL, Python; stored procedures, views, functions, query tuning
- **Data Engineering:** ETL/ELT pipelines, data integration and transformation, incremental data loading, change data capture (watermark-based), data quality checks
- **Data Architecture:** Data warehousing, data modeling (star schema, fact and dimension tables), Lakehouse and medallion architecture (Bronze, Silver, Gold)
- **DevOps & Version Control:** Azure DevOps, CI/CD pipelines, Azure Repos, Git, branching and pull requests
- **Integration & Operations:** REST API integration, JSON, Parquet, CSV, pipeline monitoring, troubleshooting, performance optimization

PROFESSIONAL EXPERIENCE

Azure Data Engineer

Dec 2021 – Present

Pristair Technologies Pvt. Ltd. | Bengaluru (Remote)

- Build Microsoft Fabric Lakehouse and Warehouse solutions on OneLake for 3 business domains, organizing 150+ Delta tables into Bronze, Silver and Gold layers.
- Develop 25+ Fabric Data Factory pipelines and Dataflows Gen2 to ingest data from Azure SQL Database, ADLS Gen2, files and REST APIs into Fabric Lakehouses.
- Write PySpark and Spark SQL notebooks in Fabric that cleanse, deduplicate, join and aggregate 50M+ rows daily, and load curated tables into the Fabric Warehouse for reporting.
- Configured Fabric workspace roles, item permissions and Lakehouse SQL analytics endpoints, giving 4 reporting teams secure, read-only access to curated data.
- Rebuilt 15+ Azure Data Factory pipelines in Fabric Data Factory and used OneLake shortcuts to reference existing ADLS Gen2 data without duplicating storage.
- Designed a metadata-driven, parameterized Azure Data Factory framework that loads 200+ source tables, cutting new-source onboarding from 2–3 days to under 4 hours.
- Developed Azure Databricks PySpark notebooks for 10+ source systems, using Delta Lake MERGE for upserts, schema enforcement and time travel for auditing.

- Implemented incremental data loading with watermark columns and change tracking, replacing full reloads and reducing nightly batch run time by about 40%.
- Built 20+ fact and dimension tables using star-schema modeling and loaded them into Azure Synapse Analytics dedicated SQL pools and Azure SQL Database for downstream reporting.
- Integrated 8 REST APIs in ADF and Databricks, handling authentication, pagination and JSON flattening, with credentials stored in Azure Key Vault.
- Tuned Spark jobs with partitioning, broadcast joins, caching and Delta OPTIMIZE and Z-ORDER, improving job run times by 30 to 50 percent.
- Set up Azure DevOps CI/CD to deploy ADF, Databricks and Fabric artifacts across 3 environments, replacing manual releases and cutting deployment time from hours to under 30 minutes.
- Built Azure Synapse Analytics pipelines and serverless SQL views over ADLS Gen2 Parquet and Delta files for ad hoc analysis and downstream consumption.
- Added data quality checks for nulls, duplicates, referential integrity and row counts, reducing data issues reported by downstream teams by about 30%.
- Work with business analysts and reporting teams to understand data requirements, and document pipeline designs, data mappings and runbooks.
- Monitor 100+ daily pipeline runs with failure alerts and retry logic, maintaining a 99%+ pipeline success rate.

Senior Cloud Engineer *Mar 2021 – Nov 2021*

JoulesToWatts Business Solutions Pvt. Ltd. | Bengaluru

- Developed 30+ Azure Data Factory pipelines with Copy, Lookup, ForEach and Stored Procedure activities to move data from 10+ on-premises and cloud sources into ADLS Gen2.
- Configured linked services, datasets, integration runtimes and schedule- and event-based triggers for batch data ingestion.
- Loaded raw files from ADLS Gen2 into 50+ staging and target tables in Azure SQL Database, applying T-SQL transformations through stored procedures.
- Organized the data lake into raw, staging and curated zones with consistent folder structures and file formats (CSV, JSON, Parquet).
- Wrote PySpark notebooks in Azure Databricks for data cleansing, type conversion and basic transformations ahead of the curation layer.
- Documented pipeline designs and source-to-target mappings for 30+ pipelines to support testing, handover and ongoing maintenance.
- Used Azure Key Vault to store connection strings and secrets referenced by ADF linked services.
- Connected ADF to Git (Azure Repos) for source control, and resolved failed activities and data mismatches to keep daily loads on schedule.

SQL Developer *Aug 2017 – Jul 2020*

Tech Neon Solutions Pvt. Ltd. | Hyderabad

- Wrote and maintained 150+ T-SQL stored procedures, views and user-defined functions to support application features and business reports.
- Created and modified database tables, keys, constraints and indexes based on application and reporting requirements.
- Extracted and prepared data for business users with joins, subqueries, common table expressions (CTEs) and window functions.
- Analyzed execution plans and improved slow-running queries through indexing and query rewrites, cutting report run times by up to 60%.
- Validated and reconciled data across 20+ source and target tables after each load to confirm accuracy.
- Built 25+ scheduled SQL data extracts and summary reports for business and operations teams.
- Supported unit testing, production issue fixes and deployment of database scripts across development, test and production environments.

EDUCATION

- Master of Computer Applications (MCA), Computer Science, Sri Venkateswara University Campus, Tirupati, 2007 – 2010

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Solutions Architect Expert (AZ-305)
- Microsoft Certified: DevOps Engineer Expert (AZ-400)
- Microsoft Certified: Azure AI Fundamentals (AI-900)
- Microsoft Certified: Fabric Data Engineer Associate (DP-700)
